WEEK8 Assignment-1:Data Wrangling with Pandas

Data Wrangling with Pandas Assignment problems

Problem-1

In [ ]:
```
The European Centre for Disease Prevention and Control (ECDC) provides an open dataset on COVID-19 cases called, daily number
of new reported cases of COVID-19 by country worldwide. This dataset is updated daily, but we will use a snapshot that contains
data from January 1, 2020 through September 18, 2020. Clean and pivot the data so that it is in wide format:
    (Get covid19_cases.csv file using this link:
     https://raw.githubusercontent.com/svkarthik86/Advanced-python/main/WEEK-8%20Assignment/covid19_cases.csv )
```

In [ ]:
```
1. Read in the covid19_cases.csv file.
2. Create a date column using the data in the dateRep column and the pd.to_datetime() function.
3. Set the date column as the index and sort the index.
4. Replace occurrences of United_States_of_America and United_Kingdom with USA and UK, respectively.
5. Using the countriesAndTerritories column, filter the data down to Argentina, Brazil, China, Colombia, India, Italy, Mexico,
   Peru, Russia, Spain, Turkey, the UK, and the USA.
6. Pivot the data so that the index contains the dates, the columns contain the country names, and the values are the case
counts in the cases column. Be sure to fill in NaN values with 0.
```

Problem-2

In [ ]:
```
In order to determine the case totals per country efficiently, we need the aggregation skills , so the ECDC data in the
covid19_cases.csv file has been aggregated for us and saved in the covid19_total_cases.csv file. It contains the total number
of case per country. Use this data to find the 20 countries with the largest COVID-19 case totals. Hints:
    (Get covid19_total_cases.csv file using this
     link: https://raw.githubusercontent.com/svkarthik86/Advanced-python/main/WEEK-8%20Assignment/covid19_total_cases.csv)
```

In [ ]:
```
* When reading in the CSV file, pass in index_col='index'.
* Note that it will be helpful to transpose the data before isolating the countries.
```

index	cases
USA	6724667
